# Do We Speak The Same Language?

- There should be a common understanding on clean energy
- Options for clean energy would be determined based on resource availability and demand characteristics
- Thinking on the same pathway or working towards one point target

# Positioning is Crucial

- The way we work – Opposition, Partnership, Expert Groups
- How do we see our working partners – Government, Parliament, Private Sector, Community
- Working to meet the expectations but what is expected from us?

# Lead by Example!

- Proving the policy model is workable locally
- Increasing community capacity and receptivity of CE technology
- Linking government – private – community for acceptable policy and business models

# Replicate or Reformulate

- Success story is the best teacher  
e.g. MHPP by IBEKA
- Success and failures can only be separated by thin lines e.g. Law No. 22/2002 on Electricity
- Never forget policy customisation to local context e.g. SHS, biogas application

*...sustainable living for all*

*Reduce emission,  
the Earth can't wait*
