

ADB Assistance for Rehabilitation and Redevelopment Aceh & Nias

The Asian Development Bank (ADB) developed the Tsunami and Earthquake Emergency Support Project (ETESP) in response to the 2004 Tsunami that devastated coastal area in Nanggroe Aceh Darussalam and the 2005 Nias earthquake.

ETESP projects focus on 5 issues critical for rebuilding:

- Livelihood restoration
- Social service provision
- Community infrastructure
- Physical infrastructure
- Fiduciary governance

ETESP's aim is to help in this rebuilding through reconstruction and development projects that support and facilitate economic revival. Consistent with the Millennium Development Goals (MDG) the projects are also consistent with GoI's plans and regulations. ETESP Package 24 is the package developed to support Spatial Planning and Environmental Management (SPEM) in 20 sub-districts (Kecamatan) in Aceh and Nias.

ETESP projects were designed and implemented in coordination with the Rehabilitation and Reconstruction Agency NAD-Nias (Badan Rekonstruksi dan Rehabilitasi NAD-Nias) as the project executive. ADB is working together with BRR in various sectors; technical assistance in financial management and projects, framing project implementation guidance, project standard operations procedures and monitoring procurement process.

Kabupaten Information

ETESP-24's Kecamatan Spatial Framework and Action Plans

Kecamatan Spatial Frameworks and Action Plans are the primary outputs of ETESP-24. They are documents that consolidate information about a Kecamatan including its physical, social and economic characteristics, infrastructure, resources and environmental factors. The documents provide an assessment of needs, issues and potentials, identify rehabilitation and development priorities, assess their costs, social and environmental consideration, and recommend actions and projects.
