

Annex 3. Field exercises on field instrumentation

This exercise was designed to provide the participants a practical and hands-on experience in the installation of different field instruments for monitoring the water status of the rice field. Some of the equipment/ instruments used are the following:

- Perched water table tube for monitoring the water status in the rice field (Fig A3, Photo 3.2).
- Evaporation pan (Photo 3.1)
- Rain gage
- Percolation meter
- Ground water tube, and
- Water flow measuring device (Weir) (Photo 3.1).
