a Total and per capita GNP are estimated according to World Bank Atlas method of converting data in national currency to current US dollars. The Atlas method averages the exchange rate for a given year and the two preceding years, adjusted for differences in rates of inflation between the country and the G-5 countries (France, Germany, Japan, the United Kingdom, and the United States). The resulting total GNP estimate is then divided by the midyear population to obtain per capita GNP.

b Estimated to be low income (US\$ 755 or less).

c Data are in terms of GDP converted from national currency to US\$ using the average exchange rate for the year.

d References to GNP relate to GDP.
