# Preparation and Adoption of a Comprehensive Management Framework for the Hunan Flood Management Sector Project

This Pilot and Demonstration Activities (PDA) helped prepare the comprehensive management framework for the Hunan Flood Management Sector Project.

This Pilot and Demonstration Activities (PDA) helped prepare the comprehensive management framework for the Hunan Flood Management Sector Project.

## Snapshot

Project site	Hunan Province, People's Republic of China
Cost	US\$ 50,000
Status	Completed
Approval date	January 2005
Completion date	October 2005
Category	Basin
ADB officer	Richard Bolt
Partner	Hunan Water Resources Departmen

## Report card

Completed in October 2005, this PDA

- Helped design a comprehensive management framework for the HWRD to improve the annual management, monitoring and reporting system of the HFMSP
- Paved the way for the improvement of HFMSP's annual management system in line with Ministry of Water Resources flood management policies
- Strengthened the management capacity of Provincial Project Management Officers and Local Project Management Officers

Read the [final report](#).

## Description

The [Hunan Provincial Government's Integrated Flood Control Plan](#) (IFCP) focuses on flood control, management, and forecasting in four mountainous river basins: Xiangjiang, Zishui, Yuanjiang and Lishui, and their flood prone cities. Thirty-six cities in Hunan Province will benefit from IFCP's upgrading of flood protection and management measures.

To execute the IFCP, ADB and the Hunan Provincial Government worked together on the Hunan Flood Management Sector Project (HFMSPP), which initiated flood management strategies in the province. An annual management, monitoring and reporting system was built into the HFMSPP and included environment and resettlement frameworks. The Hunan Water Resources Department (HWRD) took the lead in the project.

This PDA focused on the preparation and adoption of a comprehensive management framework for the HFMSPP as assistance to the HWRD. The management framework is hoped to improve HFMSPP's annual system and was expected to be of great use for ADB and the Hunan Provincial and Local Governments in the monitoring and evaluation of the HFMSPP.

## Expected outcomes

- a project management and monitoring manual for adoption by the HFMSPP and for use by ADB in its semi-annual monitoring of the project
- a workshop for the provincial and local government and the HWRD on the application of the management and monitoring framework
- a briefing to ADB on the needs to further develop the management system during HFMSPP implementation
