

## CONTRIBUTION TO THE ADB RESULTS FRAMEWORK

Level 3 Results Framework			
No.	Indicators (Outputs and Outcomes)	Targets <sup>a</sup>	Methods/Comments
1	Greenhouse gas emission reduction (tCO <sub>2</sub> -equiv/year)	372,204 tCO <sub>2</sub> /year	Estimate assumes 20% of the tranche (\$60 million) will finance renewables. Estimate is based on 39% of tranche 3's indicative pipeline is for renewable projects balanced against (i) only 14.1% of tranche 1 financed renewables and (ii) signs that the construction of renewable projects may be reaching the top of the business cycle and so actual financing for renewables may be less than what the pipeline suggests.  The estimate of 372,204 tCO <sub>2</sub> /year is based proportionally derived from the actual experience of tranche 1 where \$56.2 million of renewable projects resulted in 348,797 tCO <sub>2</sub> /year emission reduction
2	Installed energy generation capacity (megawatts)—renewable	150 mw	Assumed two projects of 75 mw each financed.
3	Roads built or upgraded (kilometers)	480 km	Assumed six projects if 80 km are financed.

km = kilometer, mw = megawatt, tCO<sub>2</sub> = total carbon dioxide.

<sup>a</sup> Assumes that nine public-private partnership projects are financed.
