

## CONTRIBUTION TO THE ADB RESULTS FRAMEWORK

| <b>Level 2 Results Framework<br/>Indicators<br/>(Output and Outcome)</b> | <b>Targets</b>   | <b>Methods/Comments</b>  |
|--|--|--|
| GHG emission reduction   | 3.99 million tCO <sub>2</sub> e to be avoided (per year from 2024) | Carbon dioxide reduction was calculated based on the coal savings of 1.37 million tons of standard coal to be used for equivalent coal-fired heating boilers. The calculation method is aligned with the Guidelines for Estimating GHG Emissions of ADB projects. <sup>a</sup> |

ADB = Asian Development Bank, GHG = greenhouse gas, tCO<sub>2</sub>e = tons of carbon dioxide equivalent.
