

## DETAILS OF IMPLEMENTATION ARRANGEMENTS

1. **Standard fund implementation arrangements.** In making the equity investment in OrbiMed Asia Partners V, L.P. (OAP V), the Asian Development Bank (ADB) will undertake the standard implementation arrangements that pertain to private equity funds—i.e., all of the processes and mechanisms used for investment performance monitoring, reporting, and evaluation. These processes and mechanisms include financial and nonfinancial monitoring.
2. **Quarterly and annual reports.** OAP V will provide ADB with (i) quarterly unaudited reports; and (ii) audited annual reports, including financial statements, a fund overview, annual development effectiveness monitoring reports and an overview of the portfolio with brief information on each portfolio company's performance and valuation. ADB will review this information and will follow up with OrbiMed Asia GP V, L.P., the fund manager, when it needs more information. If the information received from the fund manager points to issues that could impair the value of ADB's investment, ADB will decide whether to put OAP V on a watch list for more frequent review and closer attention.
3. **Nonfinancial monitoring.** The fund manager will be required to submit its environmental and social (E&S) management system to ADB and to report annually to ADB on E&S safeguards issues. The ADB deal officer will request the E&S management system reports and the annual reviews, as appropriate, and will work with the relevant fund manager staff to ensure that these documents meet ADB standards. The fund manager will be required to ensure that OAP V's investments comply with core labor standards and ADB's Social Protection Strategy.<sup>1</sup> OAP V will include information in its annual report on its compliance with core labor standards with respect to its investments.
