Initial Environmental Examination

February 2018

PAK: Balochistan Water Resources Development Sector Project

Project No. 48098-002

Part 4 of 4

Prepared by Irrigation and Power Department, Government of Balochistan for the Asian Development Bank (ADB).

This initial environmental examination is a document of the borrower. The views expressed herein do not necessarily represent those of ADB's Board of Directors, Management or staff, and may be preliminary in nature. Your attention is directed to the "terms of use" section of this website.

In preparing any country program or strategy, financing any project, or by making any designation or, or reference to a particular territory or geographic are in this document, the Asian Development Bank does not intend to make any judgments as to the legal or other status of any territory or area.

Meeting with Mir of Kazran and stakeholders of Hatachi / Kazran

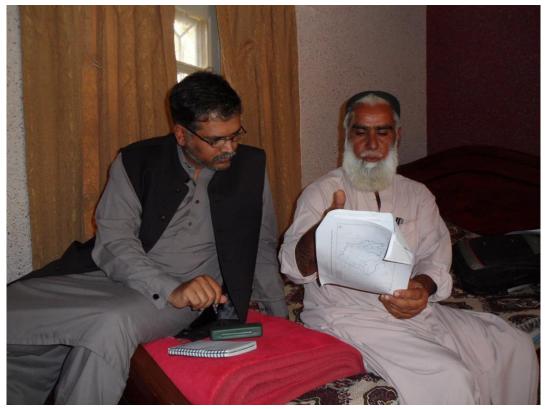

Stakeholder consultation with agriculturists of Chutta, Acherwant at Wandhri

Stakeholder consultation with agriculturists of Chutta, Acherwant at Wandhri

Stakeholder consultation with agriculturists of Khadri at Wandhri

Meeting with Sub-Engineer, Irrigation and Power Department at Khuzdar

Meeting with agriculturist at Chutta weir

Sampling during field visit at Khadri

Annexure 15: Emergency Response Plan for Damage of Infiltration Gallery

Infiltration Gallery is susceptible to damage from natural disasters such as flooding, earthquakes, landslide etc. In the event of a major disaster, the following is expected:

- There is not enough source water available to meet demand,
- There is a problem with the intake, or infiltration gallery, that does not allow enough water to be drawn

A natural disaster creating the situation when water from the source cannot be drawn, preventative measures are prescribed as follows:

- Regular inspection of intake for damage or clogging
- Regular inspection of intake failure

| Causes | Preventive measures |
|--------------------|--|
| Event: CANAL BREA | ACHING |
| Canal breaching | Closing of gaps in flood walls by sand bags or other available methods; |
| | Protection of river banks by sand bags, stone, or other available methods; |
| | Counteracting piping which is the main cause of collapse of embankment and dykes etc.; |
| | Protection of bridge piers, weirs, barrages and dams against erosion by rockfill, sand bags and other available methods; |
| | Construction of temporary non-structural protection measures to prevent the propagation of flood on non-protected land; |
| | Cutting of embankment, dykes etc. in order to allow flooding of less important areas, and thus to save other more important areas; |
| | Removing obstacles from active or potential flood ways, relief and flood bypass channels; and |
| | Protection of structures exposed to strong wind wash action. |
| Event: NOT ENOUG | H SOURCE WATER AVAILABLE |
| Drought. | Start water conservation measures as soon as water shortage becomes likely. Plan the development and use of the water source, |
| Event: DOOR RAW V | WATER QUALITY DURING HEAVY RAINS |
| | |
| Heavy rain leading | Stabilise raw water quality (using, eg, infiltration gallery or raw water |
| to high levels of | reservoir) to avoid periods of very poor quality. |
| turbidity | Inspect catchment for signs of erosion and slips that will potentially be ongoing problems. |

| Causes | | Preventive measures |
|------------------------|------------------------|---|
| Event: CONTAMINA | OF THE RIVER | OR STREAM |
| Contamination | dentify potential so | urces of contamination |
| sources present in | nsure that change | s in land use (including urban developments) and |
| the catchment. | ne potential for cor | ntamination they create, are well monitored after |
| | ommissioning of th | ne source. |
| | estrict activities in | the catchment that may contaminate the water. |
| | ather information | about the hydrology of the catchment before |
| | ndertaking develo | oment. |
| Event: WATER QUA | NOT IMPROVED | BY INFILTRATION GALLERY |
| Sediment load in raw | stablish levels of r | aw water quality that the gallery cannot handle, and |
| water too high. | ırn the gallery pun | nps off when these are exceeded. |
| Poor infiltration | ake account of the | e range of possible raw water qualities when |
| gallery design. | esigning the galler | у. |
| Event: INFILTRATIO | ALLERY PRODUC | CES LESS WATER THAN IT WAS DESIGNED |
| FOR | | |
| Clogged gravel | urn off the gallery | under extreme conditions to minimise drawing |
| packs in the | ediment deep into | the gravel packs. |
| infiltration gallery. | egular programme | e to scarify gravel pack with tractor mounted unit. |
| | NB: If gallery is in t | the stream bed a resource consent will be required.) |
| | legular programme | e of cleaning gravel packs using compressed air |
| | ances. | |
| Gravel packs and/or | egular programme | e of cleaning gravel packs using compressed air |
| screen slots calcified | ances | |
| or clogged with | | |
| oxidised iron or | | |
| manganese. | | |
| Event: INFILTRATIO | ALLERY PRODUC | CES LESS WATER THAN IT WAS DESIGNED |
| Gallery clogged by | void planting trees | s near the gallery. |
| tree roots. | | |
| Event: TOO LITTLE | ER CAN BE DRA | WN FROM THE INTAKE TO MEET DEMAND |
| Screens damaged or | egular inspection | and cleaning of screens, intensified during times of |
| clogged. | ood. | |
| | ooms and screens | s to trap weed/algae. |
| Failure of the intake | egular preventive | maintenance, as required by the conditions, and |
| due to mechanical or | nanufacturers' spe | cifications: lubrication, component replacement, |
| structural failure. | xercise valves. | |
| | Regular inspections | s of intake. |
| Catastrophic failure | ntake inspections, | regularly and directly after floods etc, with follow-up |
| (eg, flood, slips or | ction if required fo | r existing protection (eg, gabions, piling, screens |
| | nd grates, etc). | |

| Causes | Preventive measures |
|--------------------|---|
| earthquake-related | |
| damage). | |
| Pump failure | Maintenance according to manufacturers' recommendations. |
| | Standby pump with auto-switch to alternate pumps. |
| | Operate duty and standby pumps using an alternate 'number of days cycle'. |
| Power failure. | Regular inspection of cabling, power lines and connectors. |
| | Stand-by generator. |
| Vandalism/ | Construct a fence around the intake site. |
| sabotage. | |

Annexure 16: Emergency Response Plan for Flood Protection Bund

Flood-fighting measures are emergency measure deployed in the event when flood protection / control structures and flood proofing measures have failed or rendered ineffective with a sole objective of mitigating flood impacts

Reasons of Flooding:

- Failure of flood walls and embankments;
- Failure of land drainage systems causing flooding of agriculture land; and

Emergency Responses for flood-fighting in a typical case of failure of flood protection / control structures include the following:

- Closing of gaps in flood walls by sand bags or other available methods;
- Protection of river banks by sand bags, stone, or other available methods;
- Counteracting piping which is the main cause of collapse of embankment and dykes etc.;
- Construction of temporary non-structural protection measures to prevent the propagation of flood on non-protected land;
- Cutting of embankment, dykes etc. in order to allow flooding of less important areas, and thus to save other more important areas;
- Removing obstacles from active or potential flood ways, relief and flood bypass channels;
 and
- Protection of structures exposed to strong wind wash action.

Annexure 17: Emergency Response Plan for Damage of Weir

Flood-fighting measures are emergency measure deployed in the event when flood protection / control structures and flood proofing measures have failed or rendered ineffective with a sole objective of mitigating flood impacts.

Reasons of Flooding:

- Failure of dykes, flood walls and embankments;
- Reduced capacity of river channels, flood ways, and flood bypass channels;
- Failure of weirs and barrages with consequent devastating flood waves;
- Failure of land drainage systems causing flooding of agriculture land; and
- Failure of urban drainage systems causing flooding within protected urban area.

Emergency Responses for flood-fighting in a typical case of failure of flood protection / control structures include the following:

- Closing of gaps in flood walls by sand bags or other available methods;
- Protection of river banks by sand bags, stone, or other available methods;
- Counteracting piping which is the main cause of collapse of embankment and dykes etc.;
- Protection of bridge piers, weirs, barrages and dams against erosion by rockfill, sand bags and other available methods;
- Construction of temporary non-structural protection measures to prevent the propagation of flood on non-protected land;
- Cutting of embankment, dykes etc. in order to allow flooding of less important areas, and thus to save other more important areas;
- Removing obstacles from active or potential flood ways, relief and flood bypass channels;
 and
- Protection of structures exposed to strong wind wash action.

Annexure 18: Chance Find Procedure

Project routing does not envisage any archaeological site. However, in case of any chance find, the **Construction Contractor** will immediately report through **Chief Resident Engineer** of Supervision Consultant to **Deputy Commissioner (DC)** or his nominated representative, to take suitable further actions to preserve such antiques or sensitive remains; and contact the "**Culture, Tourism & Archives Department, (Archaeology Directorate) Government of Balochistan"** for further action.

Representative of the "Culture, Tourism & Archives Department, (Archaeology Directorate) Government of Balochistan" will visit the site and observed the significance of the antique, artifact & Cultural (religious) properties and significance of the project. The site visit report will be prepared and given to the concerned official of the Archaeology Directorate.

In case any artifact, antiques and sensitive remains are discovered, *Chance Find Procedures* should be adopted by Construction Contractors as follows;

- Stop the construction activities in the areas of chance find;
- Delineate the discovered site or area;
- Consult with the local community and provincial archaeological department;
- The suggestion of the local communities and the concerned authorities will be suitable incorporated during taking the preventive measures to conserve the antique, artifact and Cultural (religious) properties;
- Secure the site to prevent any damage or loss of removable objects. In case of removable antiquities or sensitive remain, a night guard shall be arranged until the responsible local authorities take over:
- After stopping work, the Construction Contractor must immediately report the discovery to the Chief Resident Engineer of Supervision Engineer for onwards communication to Deputy Commissioner (DC);
- Once authorization has been given by the responsible authorities (Archaeological Department), the Construction Contractor will be informed when works can resume.

EHC = Environmental Health Criteria Monograph; DS = Pesticide Data Sheet; HSG = Health and Safety Guide; IARC = IARC Monographs on the Evaluation of

Carcinogenic Risks to Humans; ICSC = International Chemical Safety Card; JMPR = Evaluation by the Joint FAO/WHO Meeting on Pesticide Residues.

Notes to Class la

- 1. Calcium cyanide is in Class Ia as it reacts with moisture to produce hydrogen cyanide gas. The gas is not classified under the WHO system (see Table 8).
- 2. Captafol is carcinogenic in both rats and mice.
- 3. The international trade of captafol, hexachlorobenzene, mercury compounds, parathion, parathion-methyl, and phosphamidon is regulated by the Rotterdam convention on Prior Informed Consent (see http://www.pic.int/), which entered into force on 24 February 2004. See Table 7, p. 51
- 4. EPN has been reported as causing delayed neurotoxicity in hens.
- 5. Hexachlorobenzene has caused a serious outbreak of porphyria in humans. The use and production of hexachlorobenzene is severely restricted by the Stockholm convention on persistent organic pollutants, which entered into force on 17 May, 2004. See http://www.pops.int/
- 6. Phenylmercury acetate is highly toxic to mammals and very small doses have produced renal lesions: teratogenic in the rat.

THE FINAL CLASSIFICATION OF ANY PRODUCT DEPENDS ON ITS FORMULATION See Pages 7 & 8, and the Appendix

Notes to Class Ib

- 1. 3-Chloro-1,2-propanediol in nonlethal dosage is a sterilant for male rats. This compound is also known as alpha chlorhydrin.
- 2. The international trade of carbofuran, DNOC, fluoroacetamide, mercury compounds, methamidophos, monocrotophos and pentachlorophenol is regulated by the Rotterdam convention on Prior Informed Consent (see http://www.pic.int/), which entered into force on 24 February 2004. See Table 7, p. 51.
- 3. As a precautionary measure, the classification of certain liquid pesticides has been adjusted to avoid those pesticides being assigned to a less hazardous Class in the process of aligning the WHO Classification with the GHS. Details of how the WHO Classification has been aligned with the GHS Acute Toxicity Hazard Categories are described in the introductory notes for Part II.

THE FINAL CLASSIFICATION OF ANY PRODUCT DEPENDS ON ITS FORMULATION See Pages 7 & 8, and the Appendix

Annexure 20: Table of Contents of Environmental Monitoring Report

| 1.0 | INTRODUCTION |
|-----|--|
| 1.1 | The Project |
| 1.2 | Physical Progress |
| 1. | .2.1 |
| 1. | .2.2 |
| 1.3 | Meetings/ Trainings |
| 2.0 | ENVIRONMENTAL COMPLIANCE and monitoring |
| 2.1 | Reference Documents |
| 2.2 | Scope of Report |
| 2.3 | Frequency of reporting |
| 2.4 | Environmental Mitigation and Monitoring Plan (EMMP) Compliance |
| 3.0 | Pictorial OVERVIEW |
| 4.0 | Annexure |
| 4.1 | Annexure 1A: Approval forms |
| 4.2 | Annexure 1B: Local Staff deployed at site |
| 4.3 | Annexure 1C: Rent Agreement and Rent Receipts |
| 4.4 | Annexure 1D: Daily Dust Monitoring Forms (WS-15) |
| 4.4 | Annexure 1E: Noise Monitoring at Construction Site |
| 4.5 | Annexure 1F: Air Monitoring at Construction Site |
| 4.6 | Annexure 1G: Air Monitoring at Camp Site |
| 4.7 | Annexure 1H: Air Monitoring of Vehicles and Machineries |
| 4.8 | Annexure 1J: Wastewater Monitoring at Campsite |
| 4.9 | Annexure 1K: Other Monitorings Required as per EMMP |
| | |
