<b>WORLD</b>								

... = data not available, \* = provisional or preliminary, ADB = Asian Development Bank.

a Regional aggregates are weighted averages estimated using population of annual live births for the respective year headings. The data for maternal, under-5, and neonatal deaths are from United Nations Statistics Division databases. Aggregates are derived for reporting economies only. Aggregates for East Asia exclude Hong Kong, China and Taipei, China.

b Based on national household survey data and routine health systems.

c Estimate aligned with the standard definitions of doctor, nurse, and/or midwife.

d Includes other health personnel not in alignment with standard definitions.

e Estimate provided with no clear definition of health personnel.

f Refers to institutional births, including all deliveries that occurred at a health facility.

g Calculated based on known births and deaths.

... = data not available, - = magnitude equals zero, ADB = Asian Development Bank.

a Data refer to crude suicide rates (per 100,000 population).

b The universal health coverage service coverage index is calculated as the geometric mean of 14 tracer indicators of health service coverage. The index is reported on a unitless scale of 0 to 100, with 100 being the optimal value. The reported values do not directly translate to the percentage of the population covered by universal health coverage services, but they can be viewed as performance scores.
